

All varieties are 1-gallon sized plants

Variety	Description
Jersey Giant Asparagus	The most winter hardy of all the Jersey Hybrids and widely adapted to temperate and cool climates. It produces medium to large (7-9"), green spears with purple bracts. They are often used for processing and for fresh market. Resistant to rust, fusarium, and crown and root rot. Height. 4-5 ft and will tolerate part shade.
Mary Washington Asparagus	With its great taste and long green spears, this variety has been the most popular asparagus in American gardens for the last century. Plant roots or seed in early spring. Important to keep bed free of weeds. Height 3-4 feet and prefers full sun.
Sweet Purple Asparagus	A newer deep purple cultivar that has a sweet flavor due to 20% higher sugar content. It can easily be eaten raw or cooked. The spears are less fibrous than others, which allows for more enjoyment and less waste! Height is 4-5 feet and prefers full sun. Resists fusarium, rust, and crown rot.
Crimson Red Rhubarb	This cool season, perennial plant is very winter hardy and resistant to drought. Temperatures below 40°F are required to stimulate growth. The first shoots to appear in the spring are edible petioles and leaves and will continue to grow as long as temperatures remain below 90°F. Height 2-3 feet and prefers part shade.
Hops "Cascade"	Popular among craft brewers. Dark-green cones that are medium-sized, elongated, and compact. High yields. Used in brewing for distinct, medium-strength herbal aroma as well as bittering qualities. Requires a support system — train to grow on a fence or hops trellis. Ripens in August. Grows to 2--25' tall and 3-4' wide. Prefers part shade.
Pixwell Gooseberry	Produces small to medium, pink berries with excellent sweet/tart flavor on nearly thornless canes that can be eaten fresh or transformed into jellies and pies. Very cold hardy, these plants require very little maintenance after establishment. 3-5' tall and can tolerate part shade.
Black Currant	Black colored berry best known for its use in desserts, jams, and jellies. The black currant grows on a small bush, best adapted to cool and cold climates as plants need winter chill. Hardy to well below 0F, the currant will produce in near-arctic climates. Height 4-5'. Tolerates part shade.
Red Lake Currant	Compact, mounding, deciduous shrub which grows 3-5' tall. Clusters of greenish-yellow flowers give way to long, pendant clusters of bright red currants which ripen in July. Red currants are tart and are most often harvested to make jams, jellies and pies. Height 3-5' and tolerates part shade.
Triple Crown Blackberry	Bears consistent huge fruit yields year after year. The plant is semi-erect and thornless and bears large, flavorful fruit. These strong canes can support many pounds of fruit without trellising. A good choice to help extend the blackberry season for home gardeners. Height 3-5' and prefers part shade.
Canby Raspberry	Thornless with large, firm, juicy, bright red berry. One of the best in the Northwest for freezing, canning, cooking, and fresh eating. The canes are vigorous and productive. High level of virus resistance and aphid immunity. Sensitive to Root Rot so good soil drainage is required. Not adapted to heavy soils. Prefers cooler summers. Excellent winter hardiness. Height 4-6' tolerates part shade.
Caroline Raspberry	The Caroline Raspberry (everbearing) is a new raspberry cultivar that was bred to have larger raspberries with stronger resistance to diseases. It fights off common diseases like root rot while producing two abundant harvests of huge raspberries every season. Height 4-6'. Prefers full sun.
Heritage Raspberry	This heirloom variety was long considered the standard variety for production and high-quality fruit by which fall-bearing varieties were judged. The fall crop is highly productive and ripens from the end of August through October, depending on location. Berries have good size, color and flavor. Good for jam and freezing and is delicious for fresh use, as well. Height 5-6' and prefers full sun.

Royalty Raspberry	The most popular purple raspberry variety, summer-bearing and one of the heaviest producers. Its light sweet flavor produces outstanding jellies and jams. Late ripening and excellent for table use or freezing. With both a large fruit size and plant vigor of a purple hybrid and the high fruit quality of a red raspberry. Hardy, suckers sparingly, and excellent yield potential. Height 4-5'. Prefers full sun.
Polana Raspberry	Fall-bearing variety that produces its second crop in August, making it an excellent choice for northern locations. As its name suggests, Polana comes from Poland. Hardy, compact plants have excellent productivity on vigorous, average-length canes. Berries are medium-large, bright red, glossy, succulent, firm and packed with flavor! Height 5-6' Tolerates part shade.
Top Hat Blueberry	The dwarf size of this deciduous plant makes it perfect for container gardens. Grow in full sun to partial shade conditions in USDA plant hardiness zones 3 to 7. Like most blueberry plants, this shrub prefers to be grown in acidic soils. Bees and butterflies will be attracted to the flowers and birds will be attracted to the delicious fruit. Height 1-2' and prefers full sun.
Fort Laramie Strawberry	Super hardy, wonderfully producing everbearing strawberry. You'll harvest your first berries this very summer! High yielding, vigorous plants that produce large berries right through the season. They produce an early summer crop and also a fall crop with some berries on and off all summer. (6 pack)
Eversweet Strawberry	Perfect for patio gardens. This everbearing plant produces sweet, long, cone-shaped strawberries in its very first year! It will continue producing, even when temperatures exceed 80°F. Ripens each summer and continues to fruit into fall. Self-pollinating. Everbearing Strawberries produce an early summer crop and also a fall crop with some berries on and off all summer. (6 pack)
Goji Berry	Naturally drought tolerant and prefer well-draining soil. They thrive in the ground in zones 5-9, tolerating temps down to -10 F and will flourish well in the dry west. Brightly colored orange/red fruits with a slightly sour flavor. Grows in sun or partial shade, but harvest will be greater with more sun. These viney bushes are self-pollinating but do better with additional companions. Height 6-8'
Concord Grape	Regarded as the standard of excellence for blue-black American grapes. This vigorous seedless variety produces medium-sized clusters of glossy, juicy grapes in late mid-season. Self-pollinating and easy to grow, the fruits are great for juices, jams, jellies and wine. Height 15-20' prefers full sun.
Sulfolk Red Grape	Produces firm, red, seedless eating grapes. It is also excellent for desserts. Fruits are born in loose clusters and ripens in mid-September. Its bright pink skin is tender and sweet. It is very hardy and productive. Height 5-6' but can be kept smaller with pruning. Tolerates part shade.
White Himrod Grape	This sweet, juicy grape is easy to grow and perfect for snacking right off the vine. Beautiful green ornamental foliage and dainty white flowers that pollinate themselves. Disease resistant and cold hardy, it grows quickly once it's been established in well-drained, humus-enriched soil. Height 8-10' and prefers full sun.
Niagara Grape	Produces beautiful large white seeded grape with very large clusters. It is a natural offspring of the Concord grapevine, so it is considered the white grape version of a Concord. Very productive and vigorous variety. It is a slip skin variety that is very sweet and juicy, used primarily as a table grape. Excellent grape for juices and jams. Ripens about a week before Concord. Prefers full sun.
Venus Grape	Large fruit with a blue-black color. Its flavor has a wonderful, sweet fruitiness with a suggestion of muscat. The Venus grape is excellent for table, wine, and juice. These southern bunch grape vines are very vigorous with good productivity. Spur pruning. Ripens in August, just before Concord. Height 15-20'. Prefers full sun.
Interlaken Grape	Interlaken Seedless is an early-ripening seedless grape with a strong, American flavor. The clusters are medium sized and compact with small, white berries that ripen very early. This cultivar was derived from the same cross as Himrod. The vigorous vines are disease resistant. Height 5-6'. Tolerates part shade.
